Lab 1

1. As discussed in class make sure you are comfortable accessing Google colab using the link provided. This lab is meant to do exactly that. Access the link below and follow the rest of the instructions.

https://colab.research.google.com/notebooks/intro.ipynb#recent=true.

2. To test the environment (once you are in colab) copy and paste or type the following Python code and run to see results. Can search for " colab tutorial" if need some tutorial on how to navigate the colab window eg., how to run your program once you enter the code.

```python
print("Hello, World!")

x = 5

y = "John"

print(x)

print(y)

name = "type your full names here"

print("My name is  "+ name)
```

3. Use the w3schools link provided below to see other similar python examples that you can copy and paste into colab to run for testing.

https://www.w3schools.com/python

*****Submit results from 2 and 3 above to canvas as a text document or file upload
